San Diego Space Institute Launches San Diego Space Business Roundtable

New Quarterly Forum to Unite Regional Space, Aerospace, AI, and Blue Tech Leaders

SAN DIEGO, Calif. – The San Diego Space Institute (SDSI) today announced the launch of the **San Diego Space Business Roundtable**, a new quarterly forum designed to bring together leaders from the region's space, aerospace, defense, AI, and Blue Tech communities. The Roundtable will provide a dedicated venue for collaboration, strategic discussion, and coordinated action across San Diego's rapidly growing space ecosystem.

San Diego is emerging as one of the most dynamic space and aerospace regions in the United States. From satellite systems and space weather sensors to advanced optics, autonomy, and dual-use defense technologies, the region already supports a deep and diverse base of innovation. The San Diego Space Business Roundtable is being established to connect that expertise more intentionally and to strengthen the region's role in the national and global space economy.

Purpose of the San Diego Space Business Roundtable

The San Diego Space Business Roundtable will serve as a neutral, SDSI-hosted forum where industry, government, academia, and startups can:

- Build a cohesive regional network across aerospace, AI, defense, Blue Tech, and related sectors.
- Share operational, technical, and market intelligence relevant to the space economy.
- Identify collaboration opportunities between companies, universities, labs, and startups.
- Support SDSI student training programs, internships, and research teams.
- Provide a structured venue for discussing shared challenges, future mission concepts, and regional priorities.
- Elevate San Diego as a nationally recognized hub for space innovation and applied research.

Who Should Participate

The Roundtable is intended for organizations and professionals whose work intersects with the space and aerospace domains, including but not limited to:

- Aerospace engineering, satellite missions, and space systems.
- Space weather sensors, forecasting, and data analytics.
- Autonomy, AI/ML, robotics, and edge computing for space and defense.
- Dual-use and national security space technologies.
- THz/IR optics, microbolometers, and advanced sensor systems.
- Space medicine, biotechnology, and human performance in extreme environments.
- Maritime and Blue Tech sectors with space-adjacent applications.
- Faculty, researchers, and students from regional universities and research institutes.

Professionals whose work touches space, autonomy, science, or next-generation engineering are encouraged to participate. Organizations may designate one to two representatives for Roundtable sessions.

Meeting Cadence and Format

The San Diego Space Business Roundtable will convene on a **quarterly** basis.

- **Frequency:** Four sessions per year.
- **Duration:** Approximately two hours per session.
- **Format:** Hybrid—in-person in San Diego with a concurrent virtual option (e.g., Google Meet) to enable broad participation.

Each session is expected to include:

- A short technical, operational, or market briefing relevant to the regional space sector.
- Open discussion on regional issues, opportunities, and partnership concepts.
- Time for working-group updates and coordination.
- Rotating presentations from member organizations highlighting ongoing work, capabilities, and needs.

First Session and Founding Interest Group

The inaugural session of the San Diego Space Business Roundtable is planned for **January 2026**, with the specific date, time, and location to be announced.

SDSI is currently assembling a **Founding Interest Group** of organizations and individuals who wish to help shape the initial agenda, participation guidelines, and working themes. Members of this founding group will be invited to the first session and may be asked to provide feedback on priority topics for 2026.

Why Now

Space is no longer a distant or niche domain; it is becoming a core economic engine with major implications for communications, climate, security, logistics, and scientific discovery. San Diego already hosts a substantial concentration of companies and researchers working in space-adjacent and dual-use domains. By creating a recurring, structured forum through SDSI, the region can:

- Coordinate more effectively across institutions and sectors.
- Accelerate technology transition from research to deployment.
- Support a stronger regional talent pipeline and workforce strategy.
- Present a unified voice in national and international space conversations.

The San Diego Space Business Roundtable is intended to help ensure that San Diego's capabilities are visible, connected, and strategically aligned as the space economy continues to grow.

How to Express Interest

Organizations and individuals interested in participating in the San Diego Space Business Roundtable or joining the Founding Interest Group are invited to contact SDSI directly for more information.

About the San Diego Space Institute (SDSI)

The San Diego Space Institute is a 501(c)(3) nonprofit organization dedicated to advancing space science, space technology, and space-enabled applications through research, education, and regional collaboration. SDSI connects universities, industry, and community partners to develop the next generation of space missions, tools, and talent.
